

## Access Hatches

### Access Hatches

The flexibility to tailor Mardome Trade and Ultra rooflights means an access hatch can be specified as the opening option providing safe, easy access to roof spaces for roof maintenance and other utility purposes or to open up roof spaces for terraces or roof gardens.

Mardome Trade and Ultra access hatch rooflights feature internal opening mechanisms incorporating hinged dome unit and gas springs to facilitate a 90° opening. Units come complete and ready to fit. When in the open position, the dome unit is supported by the gas struts.

Mardome access hatches can be configured to meet a range of specification needs including insulation, security and light transmission, and have a variety of kerb options to satisfy installation requirements on site.

The step by step product selector on pages 10 to 15 will assist you in meeting your specification requirements.

Brett Martin Daylight Systems also supplies a range of aluminium and glass flush top access hatches in a range of sizes and options - please call 024 7660 2022 for details.
